The author argues that our current relationship with animals is based on a false dichotomy: we either see them as objects to be used and exploited, or as sentient beings deserving of our compassion and respect. This dichotomy, the author contends, is both logically flawed and morally bankrupt.

Instead, the author proposes an alternative ethic based on the principle of compassion. This ethic recognizes that animals are sentient beings

capable of suffering and pleasure, and that we have a moral obligation to treat them with respect and kindness.

The book explores the implications of this alternative ethic for a wide range of issues, including:

- The use of animals in food, clothing, and entertainment
- The treatment of animals in scientific research
- The protection of endangered species
- Our relationship with companion animals

The author does not shy away from the difficult questions, and the book is sure to provoke discussion and debate. However, it is ultimately a hopeful and inspiring work that offers a vision of a more just and compassionate world for both humans and animals.
