Reasoning and Rationality: Unveiling the Cognitive Underpinnings

Hand in hand with his analysis of normativity, Turner delves into the realm of reasoning and rationality, seeking to unravel the cognitive processes that underpin our decision-making and ethical judgments. Drawing upon insights from cognitive science and philosophical logic, he challenges the classical view of rationality as a purely deductive process, instead proposing a dynamic and context-dependent model of rational thought. This innovative approach opens new avenues for understanding the complexities of human decision-making and the intricate interplay between reason and emotion.

The Enigma of Human Agency: Freedom, Choice, and Responsibility

At the crossroads of normativity and rationality lies the enigmatic concept of human agency. Turner grapples with the profound philosophical questions surrounding freedom, choice, and responsibility, probing the extent to which our actions are truly self-determined or influenced by external factors. Through a meticulous analysis of the nature of intentionality and the interplay between freedom and determinism, he offers a nuanced understanding of human agency, challenging simplistic notions of free will and determinism.
