Food is essential to life. It provides us with the energy we need to function and the nutrients we need to stay healthy. But where does our food come from, and how does it get to our plates? The answers to these questions lie in the field of food science and food systems.

Food science is the study of the physical, chemical, and biological properties of food. It encompasses a wide range of topics, from food safety and quality to food processing and packaging. Food systems, on the other hand, are the networks of people, organizations, and resources involved in producing, processing, and distributing food.

Understanding food science and food systems is essential for anyone who wants to make informed decisions about the food they eat. This book provides a comprehensive overview of these topics, making it an essential read for food science students, professionals, and anyone interested in the science of food.
